

## A Further Study of Visual Perception

Originally published in 1952, this book was built upon a reconsideration of the findings presented in Vernons 1937 title, Visual Perception. The text puts forward the belief and contention that the individual constructs his perceived world as far as possible in accordance with the maintenance of the maximum of stability, endurance, and consistency. An appendix section and indices are also included. This book will be of value to anyone with an interest in perspectives on the nature of visual perception.
