

Developmental Psychology

Why does our memory of our first birthday differ from our memory of our last birthday? What makes children with the same parents have different characters? At what age are children likely to become involved in cyberbullying? Developmental Psychology 1st edition provides a clear and lively coverage of the main topics and concepts required by the British Psychological Society (BPS). The book takes a broadly topical organisation addressing the social and cognitive strands of development, providing an intuitive pathway through the core topics, and a final section which focuses on the clinical and applied aspects of the subject. The text has been pedagogically developed to encourage the reader to engage with empirical research as well as theory, to make links between different areas of development, and to recognise common themes.
