

Character and Intelligence: An Attempt at an Exact Study of Character; Being a Thesis Approved for the Degree of Doctor of Science in the University of London (Classic Reprint)

Excerpt from Character and Intelligence: An Attempt at an Exact Study of Character; Being a Thesis Approved for the Degree of Doctor of Science in the University of London This monograph constitutes the report of some research work conducted in the department of experimental psychology of University College, London, and originally formed a doctorate thesis on An Attempt at an Exact Study of Character, presented to the University of London in July, 1914. As far back as 1883 Francis Galton, in *Inquiries into Human Faculty and its Development*, wrote: The subject of character deserves more statistical investigation than it has yet received, and none have a better chance of doing it than schoolmasters; their opportunities are indeed most enviable. It would be necessary to approach the subject wholly without prejudice, as a pure matter of observation, just as if the children were the flora and fauna of hitherto undiscovered species in an entirely new land. This task the writer has attempted, - the task of utilising the weapons of statistical methods to cut a path into what has been called a perfect jungle of psychological expressions of unknown (or little known) meaning. Prior to the reduction of many phenomena in the physical world to scientific law and the consequent material advantage to the human race, there have always been men ready to say: These things cannot be done; they are beyond the range of human ken. When the laws are determined, so that man bridles the lightning to his service, and unlocks the energy of the mineral, the wonder and mystery are still there; we can say of such a simple process as the burning of a candle what the poet says to the flower in the crannied wall: but if I could understand What you are, root and all, and all in all, I should know what God and man is. So of our study of character. The fact that the wonder and mystery must

remain need not deter us from searching for the general laws underlying its action. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
