

## Exploring the Use of CLT in Saudi Arabia: A study that examines the feasibility of communicative approach in Saudi classrooms

This study investigates the viability of implementing CLT in Saudi classrooms. This was accomplished by highlighting the following questions: What are teachers actual practices in language classrooms regarding certain aspects of CLT: the importance of grammar, error correction, teachers role, students role, group work, and testing? And will teachers face challenges in adopting CLT? If so, what are the major difficulties that teachers in Saudi Arabia believe they will encounter in implementing CLT? To answer these questions, 100 female teachers participated to this study by filling out surveys. 12 of those teachers also contributed to the second part of the study in which they constituted three focus group discussion. The discussions were about teachers understanding of CLT and obstacles they might face while implementing it. According to the findings, the study provides significant recommendations for educators, teachers, curriculum designers, and administrators.
