

Clinic Manual of Mental Diseases: For Practitioners and Students (Classic Reprint)

Excerpt from Clinic Manual of Mental Diseases: For Practitioners and Students Why a preface begins with an apology, I have never been able to understand. A book must stand or fall very much on its own merits, and an apology will not help it. I am not concerned, therefore, to offer an apology for the appearance of this work; but a certain explanation is due to those for whom it has been written. A search may be made in its pages for pathological teaching. Of such there is none. The pathology of insanity has yet to be written. We have had to retrace our steps in this respect, and begin de novo with what in bacteriology are called control experiments; in other words, we required to be certain of normal data before we could determine what are abnormal. Dr. Robert Hutchison obtained from the post-mortem room of the Royal Infirmary, Edinburgh, reputedly normal brains. From these he cut sections and examined them, and he discovered in them, what have hitherto been regarded as pathognomonic of some forms of insanity - vacuolation of nerve cells, pigmentary degenerations, etc. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
