

The Origins of Human Behaviour

The Origins of Human Behaviour is written in plain English to help us understand how we evolve into the person we become. It sets out to find and explain the major influences, and demonstrates that the origins of human behaviour contain some genuine surprises. Just what are the origins of our myriad personal qualities? Author Bernard Rourke never accepted that living in slums and suffering abuse are principal factors in creating a persons character and temperament. There had to be other more dramatic sources of influence. He examines the role of instinct and other inheritance issues in the animal kingdom, because he believes what has been successful for millions of years might well have carried over into our species. Is human behaviour environmental or ancestral, and what makes us unique individuals? The book also discusses the value of the worlds main religions and what influence we really have in our childrens personal development. About the Author: Bernard Rourke was born in 1934 in Liverpool, England. During World War II, he was evacuated for three years, and later obtained a BA and a teaching diploma from Sheffield University. He joined the Army and was sent to London and Hong Kong to study Mandarin Chinese to qualify as an interpreter. Rourke was the seventh of eight children and, from an early age, the disparity in the identities of his siblings created a life-long fascination with how do we become who we become.
