

Genes & Cancer: Ubiquitin Marks the Cancer Web: Volume 1, Issue 7; July 2010

Over the past 2 decades, evidence has led to an increased appreciation of the role ubiquitin and ubiquitin-like proteins play in the regulation of biological and pathological phenomena, including cancer. In *Ubiquitin Marks the Cancer Web*, editors J. Alan Diehl (Abramson Family Cancer Research Institute), Dale D. Hains (Mari Lowe Center for Comparative Oncology, University of Pennsylvania), and Serge Y. Fuchs (The Fels Institute for Cancer Research, Temple University School of Medicine), have brought together a variety of perspectives from leading researchers to bring a fresh look to this emerging topic. According to their preface in this issue, the next decade promises to be exciting as it should not only deepen our theoretical understanding and resolve the controversies but also evolve toward more translational efforts that exploit ubiquitin-related targets for the anticancer therapies.

Ubiquitin Marks the Cancer Web: Volume 1, Issue 7: July 2010 - Books Genes & Cancer: Ubiquitin Marks the Cancer Web - SAGE Publishing Apr 12, 2010 Volume 293, Issue 7 2010 Wiley-Liss, Inc. So it is important to prevent metastasis of cancer cells. Caveolin-1, a 22 kDa integral membrane protein, is a major . the mRNA expression of above three genes was significantly lower in marks it for ubiquitin-mediated degradation through the proteasome
