

The Uncertainty Principle

Within the realm of science, the uncertainty principle speaks of the fundamental limits of knowledge and measurement vis-a-vis the external world. Critic Martin Herbert's compact collection of essays examine layers of unknowing and open-endedness within a diversity of contemporary art practices since the 1970s. If a work of art is always completed by the viewer, as Marcel Duchamp put it, then the works considered here equate completion with construction. In navigating us through a succession of artists' approaches, Herbert, an associate editor for *Artforum* and frequent contributor to *Artforum* and *Frieze*, discloses how constructed experiences of not knowing can lead to deep engagements to themes from history to politics, epistemology to our own mortality.
