

Analysis of Resource Management in Complex Work Systems: Using the Example of Sterile Goods Management in Hospitals

This book develops and assesses a decision-making model for resource management in complex work systems in line with the Systems Engineering method. It applies the Balanced Scorecard to the development of the criteria system for decision-making, and employs fuzzy linguistics theory to evaluate the alternatives. Further, the book assesses the application of this model in a hospital that has to decide whether or not to outsource its sterile goods. The use of the model opens up a diverse range of fields for decision-making in the area of complex work systems.
