

# Local Environmental Sustainability

Local Environmental Sustainability sets the context for local environmental sustainability and, in particular, considers how local government can promote sustainable development by building partnerships with different groups and organizations in the local community. Using case studies, individual chapters focus on different types of regional and local initiatives, the partnerships which have made them possible, and the key issues in making them effective. Local Environmental Sustainability provides a blueprint for both local governments and local communities to work together effectively for a more sustainable future.
