

Quantitative Anaesthesia: Low Flow and Closed Circuit (Anaesthesiologie und Intensivmedizin Anaesthesiology and Intensive Care Medicine)

Quantitative anaesthesia - exact registration of the degree of anaesthesia - has long been the anaesthetists dream. Such precision could decrease the risk for the patient. Can this dream now be realized in the foreseeable future? And can the quantification be technically verified? This workshop was organized for these questions to be discussed by a group of experts. Schleswig-Holstein was a logical location for such a gathering. Medical and associated technical advances have socioeconomic consequences: in Schleswig-Holstein there are nowadays more jobs in medical technology than in the traditional shipbuilding industry. The encouragement of medical research and related technical innovation is thus a central component of public policy. One result of this emphasis was the recent setting up of a study group on medical technology, one of the aims of which is to provide a forum in Schleswig-Holstein for meetings such as this. The intention is to consolidate Schleswig-Holsteins reputation as a centre for both medical-technical development and scientific discussion. The organizers of this scientific workshop thank the Schleswig Holstein Ministry of Economics and Transport and Dragerwerk AG for their support.
