

Positron Emission Tomography: A Critical Assessment of Recent Trends (Nato Science Partnership Subseries: 3)

A critical summary of the state of the art of Pet technology and related disciplines (camera physics, radiochemistry, radiopharmacology, computerised brain atlases and databases, etc.), plus a survey of the most recent developments in the clinical and neuroscience applications of Pet. The chapters systematically guide the reader from the basics of the technique - including new camera designs, new drugs, and new statistical and image processing approaches - through its most important clinical applications - in neurology, psychiatry and oncology - to the most sophisticated neuroscience applications, including research into human sensory and motor systems, the functional organisation of imagery, volition, attention and consciousness in the human brain.

Positron Emission Tomography: A Critical Assessment of Recent This pdf ebook is one of digital edition of Positron. Emission Tomography A Critical Assessment Of Recent Trends Nato Science.
