

Prostatic Carcinoma: Biology and Diagnosis (Clinics in Andrology)

In the last decade substantial progress has been made by scientists and clinicians to intensify their research in the understanding of prostatic physiology for better diagnostic techniques. Thanks are due to the contributors who prepared their chapters and to the application of modern techniques in microanatomy, immunology, pathology, genetics, endocrinology, neurophysiology, and instrumentation. Thanks also are due to Ms. Lori Rusty, for her editorial skills, and to Mr. Jeffrey Smith of Martinus Nijhoff for his fine cooperation during the production of this volume. An attempt is made in this volume to coordinate the production of this volume. anatomical, physiological, biochemical, endocrinological, pharmacological and immunological aspects of human prostatic carcinoma. It is hoped that this volume will serve as a stimulus to basic research in the field of prostatic carcinoma. PROSTATIC CARCINOMA: BIOLOGY AND DIAGNOSIS 1. BIOLOGICAL ASPECTS 1. FUNCTIONAL ANATOMY OF THE PROSTATE E. SPRING-MILLS and A. KRALL I. EMBRYOLOGY into smooth muscle cells and collagen secreting fibroblasts. These cells form the stroma which ensheathes the branching glands and ejaculatory ducts. The prostate gland develops from solid endoducts as they pass from the junction of the vas deferens and seminal vesicles to the urethra.
