

Reality and Empathy - Physics, Mind, and Science in the 21st Century

This book, absorbing, provocative, original, skeptical, and often very funny in spite of formidable scholarship, focuses on the change in self-perception which physics might bring about if it were made in some way empathically real to non-physicists. The author lays out a comprehensive survey of impending changes in the philosophy of science, and ranges through physics, biology, mathematics, Jungian psychology, and evolutionary theory, turning also to look at other, non-Western-scientific, world models.
