

## The Psychology of Mentally Deficient Children (Classic Reprint)

Excerpt from The Psychology of Mentally Deficient Children Mental deficiency has existed and has been recognized as such since the earliest times. We find it mentioned in the legends and historical writings of the most ancient peoples. In those far away times we find that individuals of weak intellect were treated very differently in different nations. Among the Orientals, the Brazilians, the North American Indians and in many parts of Ireland and Brittany, the feeble-minded were considered to be under the special protection of deity, and consequently were treated with all respect and consideration. The Greeks, on the contrary, took the opposite point of view; the mentally weak as well as the physically weak were left to die from exposure. During the middle ages we find scattered records which seem to show that in some monasteries and nunneries of Europe a few feeble-minded children were cared for in a common sense way. Bonnet and Pereire in their treatment and care of the deaf-mutes were the forerunners and gave the inspiration to those who were interested in the mental defectives. It is not until the nineteenth century, however, that we find either scientific research and inquiry in the field of mental deficiency or any literature at all valuable. The first publications worthy of note are from the hand of Itard, a French physician. About 1800 some soldiers passing through the forests of Aveyron discovered a boy, more animal than human, whom they brought to Dr. Pinel, of Paris. Upon examination, Pinel pronounced the boy to be an idiot and therefore incurable. Itard took the opposite point of view and contended that the case was not beyond hope. To prove his diagnosis Itard undertook the treatment of this young savage and in 1801 published his pamphlet, *De l'Education dun Homme Sauvage* which was followed in 1807 by another. These are virtually reports of Itards methods and

theories of the treatment and education of this idiot. We know of the failure of the physicians plans, but his work and suggestions for the methodical treatment of like cases gave the impetus necessary to further work in this same field, and from this time on we find that the education of the feeble-minded attracted much attention in France.
