Excerpt from The Influence of the Brain on the Form of the Head, Vol. 3 of 6: The Difficulties and Means of Determining the Fundamental Qualities and Faculties, and of Discovering the Seat of Their Organs; Exposition of the Fundamental Qualities and Faculties, and Their Seat, or Organology On the influence of the brain on the form of the Cranium, or an examination of the question, in What circumstances can we derive, from the external form of the cranium or head, inductions relative to the degree of development of the brain,As a whole, or to that of any of its parts, and Consequently form a judgment of the degree of the moral and intellectual dispositions, by the examination of the external form of the cranium or head?In the first volume of this work I have proved, that the instincts, propensities, and faculties are innate, in animals, as well as in man, and that, in this life, the manifestation of none of these dispositions is possible, without the aid of material instruments.In the second volume, I have shown, that, of all the parts which constitute animal organization, the brain is the only one, which can be exclusively regarded as the instrument, by which the moral qualities and intellectual faculties are exercised.Finally, I have proved that the brain is composed of several organs, constituting as many particular material instruments, as there are moral qualities and intellectual faculties, essentially distinct.About the PublisherForgotten Books publishes hundreds of thousands of rare and classic books.
